

The **Code Blue** Difference

The IP Advantage: Taking Security into the Future

While there's little doubt that analog technology still plays a major role in today's security landscape, more and more organizations are discovering the multitude of options offered by IP communications.

As the future of emergency communication solutions continues to move toward a foundation built on IP components, consider these advantages when you're deciding on the upgrades to make to your own security plan.

- **Ease of use:** After an easy installation process, there will be only one network to manage.
- **Unlimited scalability:** Flexibility and adaptivity mean technology upgrades will not require new infrastructure in the future.
- **Return on investment:** In addition to having no new phone or copper lines, hardware is becoming more available and less expensive while providing more capabilities.
- **Improved performance:** Technological breakthroughs make a wide range of features – speed, clarity, range, versatility, etc. – more dynamic.
- **Integration opportunities:** Increased functionality and collaboration with other applications exist for both security and IT departments.
- **Open platform:** Strong user interfaces allow for remote accessibility and the automation of routine administrative and maintenance functions.

FEATURED PRODUCTS

IP5000:
This IP speakerphone offers a range of self-monitoring and fault reporting features, including communication service, loss of power, battery voltage monitoring, button failure, speaker failure and microphone failure.

IP1500/IP2500:
These full duplex VoIP speakerphones are ideal for a wide range of indoor and outdoor areas, including hallways, classrooms, stairwells and more with a compact, lightweight design that offers a full package of unique features (SIP standards, fault monitoring, auxiliary output).

Blue Alert® EMS:
An innovative incident response software solution that monitors, records and stores information with an easy-to-use interface, it integrates with a wide range of IP technologies, including surveillance cameras.

ToolVox® X3:
Routine administrative and maintenance functions can be automated with this sophisticated management platform, which provides real-time monitoring of IP devices.
