Safety, Illuminated.

The Code Blue Motion Sensing Area Light heightens visibility and peace of mind, right where and when it's needed most.

Security Shouldn't
Leave You in the Dark.

Your property's safety is complex. Balancing cost, coverage, and reliability across sprawling properties means every investment needs to work harder and smarter. That's why we designed the Motion Sensing Area Light: a powerful, retrofit-ready upgrade that transforms your Code Blue Help Points into proactive safety beacons. No guesswork. No compromises. Just automatic, wide-reaching illumination that activates the moment someone needs it.

Proactive Safety, Visible Confidence.

The presence of a well-lit Help Point doesn't just assist someone in distress—it actively discourages nefarious behavior and signals to your entire community that their safety is a priority. With motion-activated, 360° coverage, you're not waiting for an emergency. You're preventing one.

The Motion Sensing Area Light is the latest example of our commitment to innovation that works for you: reliable, powerful, and built to integrate seamlessly into the systems you already trust.

Motion Activation
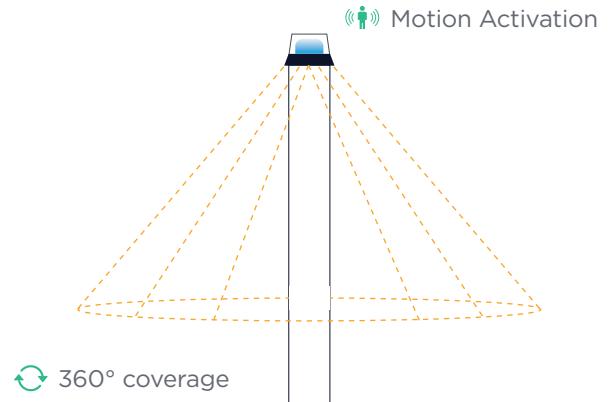

360° coverage

Brighter Coverage.
Smarter Safety.

The Motion Sensing Area Light brings proactive, 360° illumination to your CB-1 and CB-5 Help Points—no button required.

Automatic Activation
When It Matters Most

Motion-triggered lighting up to 40 feet away. Your community doesn't have to find the button to get help. Four PIR sensors detect movement from every direction, instantly flooding the area with bright, reassuring light—no action required. It's safety that meets people where they are.

Superior Power
and Performance

Dependable brightness, even off-grid. With an average output of 2,580 lumens and a solar option, your Help Points stay powered and ready—day or night, rain or shine. Plus, an ambient light sensor conserves energy during daylight hours, so you're always prepared when darkness falls.

Light That
Reaches Farther

Illuminate the entire area, not just a face. The Motion Sensing Area Light is mounted at the top of your Help Point, projecting a minimum 10-foot radius of clear, powerful illumination. Real visibility. Real deterrence. Real peace of mind.
Built to Fit
Your System

Seamless integration with CB-1 and CB-5 Help Points. Add the Motion Sensing Area Light as a powerful upgrade to your existing CB-1 or CB-5 towers. Installation is straightforward, compatibility is proven, and impact is immediate. It's the security enhancement you can trust to work with the Code Blue units you already have.

Safe Community Spaces.

Why Choose the Motion Sensing Area Light?

- Automatic activation, no button required
- 360° motion detection up to 40 feet
- Wide-area illumination, 10′+ radius
- Retrofit-ready for CB-1 and CB-5 Help Points
- Solar-powered option with 180-watt capacity
- Superior performance vs. competitor solutions
