HANGER PLATE

Product Description

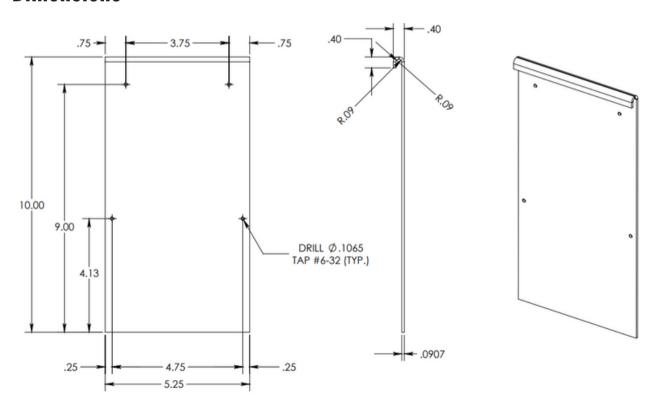

The need for additional components to be installed a Code Blue Help Point® continue to grow on a seemingly daily basis. Sometimes that creates the question of where can said components be installed? One of the answers to that is by utilizing a Hanger Plate. These aluminum plates allow quick and easy installation of additional components such as cellular service communication, networking components, audio or video components, and much more. The install location of these plates can easily be found by removing the faceplate speakerphone, so it does not require multiple technicians on site, or complete removal of a Help Point® to service it.

Available For:

The hanger plate is available for the following Code Blue towers:

- CB 1-e
- CB 5-s
- CB 1-s
- CB 9-s
- CB 1-w
- CB 9-t
- CB 5-p
- CB RT

Dimensions

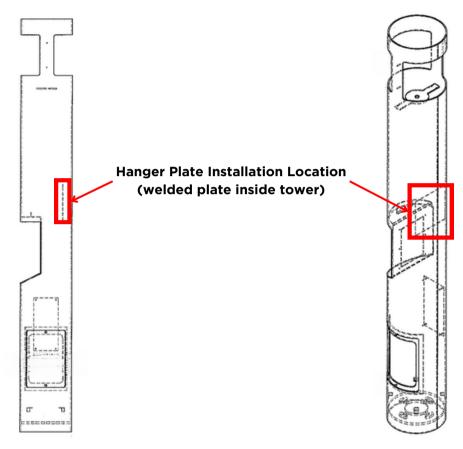

Note: Specifications subject to change without notice or obligation on the part of Code Blue Corporation.

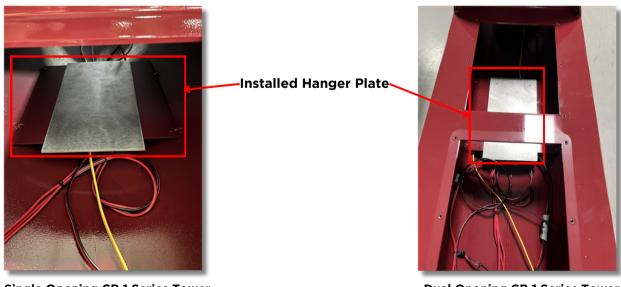

Installation Location

Inside of the tower, located behind & slightly above the speakerphone opening, is a solid steel plate welded in place. This is the location that the Hanger Plate is designed to be installed. On dual opening towers, this plate is typically located directly behind the upper opening. To install the plate, simply place the curved portion of the plate over the top edge of the welded plate, allowing gravity to keep it in place.
