

## Product Description

Sometimes, when navigating an unfamiliar location or while experiencing an emergency, knowing exactly where you are can be difficult to pinpoint. One of our newest speakerphone accessories, the **Location Plate**, is designed to help with situations exactly like this. They are mounted on to any existing or new faceplate speakerphone & helps users know exactly where they are. This can be helpful while someone is actively using the Help Point® for assistance as well as a quick & easy visual to someone walking by. The text is laser etched into stainless steel, making them just as durable as the speakerphone you are mounting them to. The text is also customizable to meet the needs of your site.

## Available For:

The location plate is available for the following Code Blue faceplate speakerphones:

- IA4100 Analog Speakerphone
- IP5000 Legacy Speakerphone
- LS1000 VoIP Speakerphone

## Mounting Options:

Mounting a Location Plate to a faceplate speakerphone is very easy. First, determine whether or not you want the plate located at the top of the speakerphone or in the center. Please note, for speakerphones with dual buttons and/or a keypad, the center mounting location is not possible. Please use the top location with these models. Once you pick where you want the plate located, remove the two corresponding security screws from either side of the speakerphone. Put the Location Plate into place & place the security screws back into the holes they were previously removed from. Firmly tighten the security screws to complete the installation.

LS1000-S shown, with center location being used.

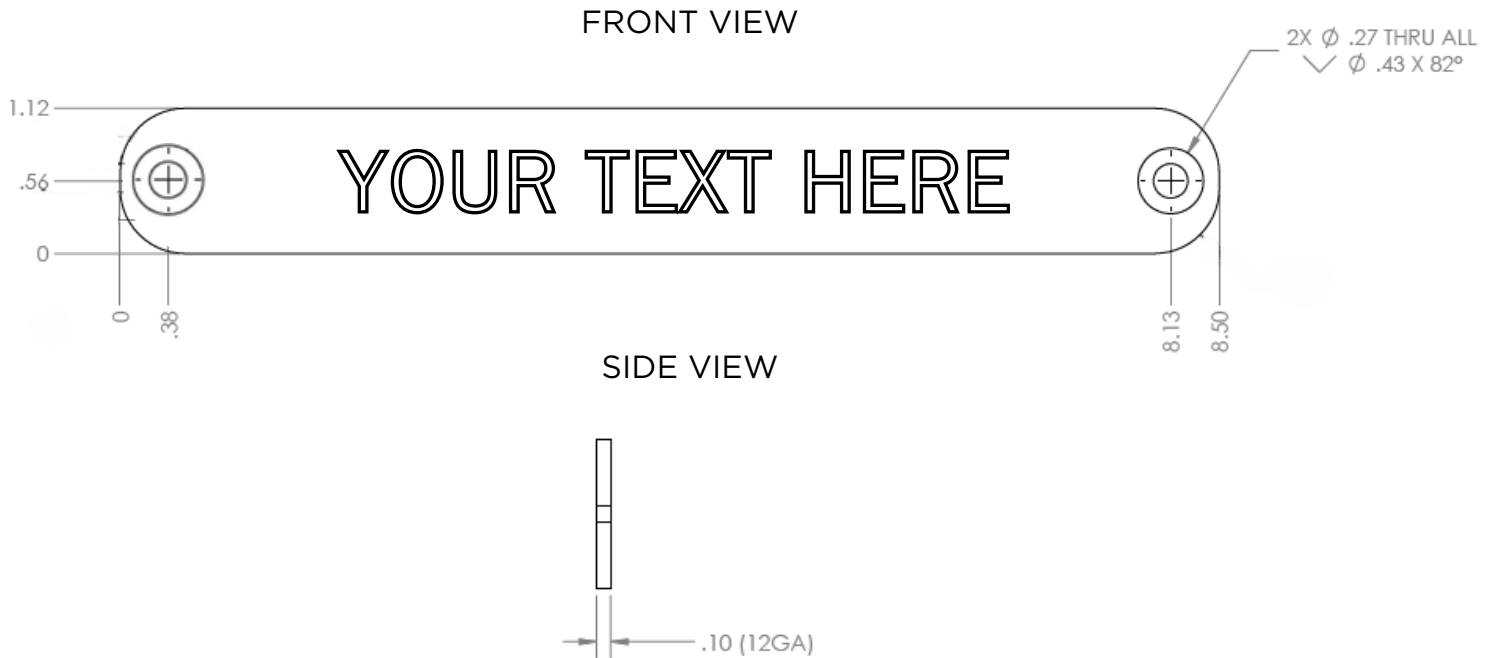

IA4100-K shown, with top location being used.

Note: Specifications subject to change without notice or obligation on the part of Code Blue Corporation.
