

BUILT TO LAST: TOWER STRENGTH & RELIABILITY

Don't just install.

Choose a solution that stands up to time, weather, and the unexpected.

VANDAL-RESISTANT

Each tower is equipped with industrial-grade reflective graphics and protected by weather-resistant, UV- and graffiti-resistant coatings. Our durable four-coat paint process includes a corrosion-resistant primer, ensuring long-lasting performance with minimal maintenance.

DURABILITY UNMATCHED

Made from 10 gauge carbon steel, our freestanding towers are built to resist vandalism and harsh conditions. They're weather-sealed with vented rubberized gaskets and finished with a durable, corrosion-resistant coating.

VISIBILITY THAT ENDURES

Our towers are designed to remain highly visible even in the most challenging environments. The integrated area strobe light uses 12 high-flux white LEDs, each with precision collimator optics that leverage Total Internal Reflection (TIR) technology to deliver a bright, easily locatable signal around Code Blue units.

FACEPLATE SPEAKERPHONE

Add a speakerphone for maximum connectivity and clear communication. Constructed of thick stainless steel with vandal-resistant openings, and a weatherproof speaker, it's built for long-lasting, reliable performance.

LIGHTER BY DESIGN

Now 44% lighter, our rugged steel enclosures are easier to install without compromising the strength to withstand vehicle impacts, floods and hurricanes.
